## YDATA.AI

### DATA LEAP

YData aims to support a world led by data, enabling organizations to guarantee their users' privacy and be compliant with privacy regulation.

#### Technologies

Internet of Things, Artificial Intelligence/ Machine Learning, Advanced software (e.g. assets optimization, data management)

#### Website

[ydata.ai](http://ydata.ai)

#### Country of Origin

Portugal

#### Stage

Product ready with paying customers

#### Year of Birth

May 2019

**Gonçalo Ribeiro**  
CEO

## WHAT'S DIFFERENT?

The use of YData's Data science helps companies to develop data-driven solutions faster, while keeping their data private and easy accessible for data science teams. It allows data scientists to be owners of the delivery of the full life-cycle of data solutions - from the data collection until the models delivery in production - while using the tools they're already familiar with. No learning curve required for adoption nor different teams dependencies. Besides that, having the whole process managed by the same platform ensures consistency while synthetic data fastens the data access.

## BUSINESS MODEL

YData has a browser-based solution for one time synthetic data generation, the standalone synthetic data generator, the unified data science platform and the data marketplace. The browser-based solution is self-service and paid per usage. They charge a monthly fee (billed annually) that will vary according to the usage (volume of data and number of generators). The data marketplace will run as any e-commerce platform, with a transaction fee.

## INVESTMENT

**Raising:** No
