YOTTA ENERGY

ENERGY STORAGE & FLEXIBILITY

Yotta Energy is a renewable energy service startup with a goal to make energy storage cost-effective, simple, safe, and durable. They are on a mission to lead the world's transition to 100% clean renewable energy by simplifying its keystone: energy storage.

Technologies

Internet of Things, Solar Energy, Renewable Energy

Country of Origin

United States

Stage

Product ready with paying customers

Year of Birth

March 2017

Omeed Badkoobeh
CEO & Cofounder

WHAT'S DIFFERENT?

Yotta's patented solution is unique because it's the first energy storage solution with passive thermal regulation that fits perfectly under an industry standard solar module. This means it can be installed outside without the need for expensive HVAC or fire sprinkler systems. The modular design also means that no additional real estate is required which makes this particularly attractive in urban areas where energy demand is high. Energy storage can be added over time to meet the growing energy needs of the clientele.

BUSINESS MODEL

Initial revenue streams will be a mix of product sales through channel development partners and internal project development. Yotta also plans to charge subscription fees for their proprietary renewable energy software that provides electric bill optimization and smart response management control features. Their initial technology demonstrations have resulted in their first revenues.
